OBEY AT UW - STEVENS POINT FOR BRIEFING ON SUSTAINABLE TECHNOLOGY CENTER

STEVENS POINT, WI - Seventh District Congressman Dave Obey (D-WI) was on campus today at UW-Stevens Point for a briefing on how the University plans to use \$1.4 million in federal funds that he secured in the omnibus appropriations bill that was signed into law recently to help establish the Wisconsin Institute for Sustainable Technology (WIST).

" Central Wisconsin has a lot of people working at the cutting edge of forestry, paper science and energy independence. WIST is intended to bring those people together and help make the state a leader in developing sustainable technologies and, we hope, new jobs, " Obey said. " I'm glad we were able to get some money to help get this institute off the ground, and I'm happy to be here today to see things firsthand. "

Specializing in applied science research and development, WIST is intended to provide state-of-the-art education to students in industrial sciences, engineering and natural resources, while helping develop and apply sustainable technology solutions to real-world problems with research focused on paper science and nanotechnology, biomass, biofuels and bio-refineries, soil and water resources, air and water resources.
